SUMMARY

Backend engineer building distributed systems at production scale. At Amazon, owns projects end to end across 6+ services, working with finance, tax, accounting and product teams. Built a prepaid payments platform that eliminated \$10M+/year of credit risk. 3 years of backend experience using Java, Spring Boot, Node.js and AWS; previously led a team of 4 to ship an AI-powered video KYC product.

WORK EXPERIENCE

Amazon, Hyderabad – Software Development Engineer I Mar 2025 – Present

- Prevented **\$10M+/year** of unpaid-shipment credit risk by designing and launching an end-to-end **prepaid wallet platform** with Java REST services, React/Redux and real-time card, UPI and net-banking payments.
- Reduced refund time from **~3 days to ~30 minutes** by replacing a manual workflow with self-service withdrawals; authored the **HLD/LLD**, aligned it with finance and accounting, and built it using **Java/Spring Boot** and React.
- Secured refund payouts against **double-payment** and race conditions by designing disbursement APIs with **Amazon SWF** orchestration and **UUID idempotency** keys, plus server-side authorization and CSRF protection.
- Slashed **AWS Lambda invocations 67%** (600K to 200K per day) and **end-to-end latency 65%** by optimizing an event-driven **serverless pipeline** to evaluate rules only on the shipment events that produced output.
- Automated account-statement generation for **5000+ businesses** by building a PDF pipeline triggered by invoice-creation events, using Velocity templates, **Elasticsearch** queries and unit/integration tests (JUnit, Mockito).

iBind Systems, Bangalore – Software Development Engineer Jul 2023 – Oct 2024

- Trimmed **manual KYC review work 30%** by building **Node.js/TypeScript REST APIs** that automatically cross-check company documents, generate agreements and send them for e-signature.
- Raised video identity-verification accuracy from **80% to 93%** by leading a team of 4 to build an **AI-powered video KYC system with liveness detection** (blink, head-movement and smile checks) for desktop and mobile.
- Decoupled **document processing**, email/SMS OTP delivery and **verifiable-credential issuance on the Polygon blockchain** from user-facing APIs with **RabbitMQ** async workers, so requests no longer waited on slow tasks.

AI and Robotics Ventures, Bangkok – Software Development Engineer Intern Jun 2022 – Nov 2022

- Lowered **database query load 40%**, **latency 30%** and **cache misses 53%** by syncing a **Redis** cache with **PostgreSQL** in real time through **change data capture (Debezium + Apache Kafka)**.

Culinda, Hyderabad – Machine Learning Intern Aug 2021 – Nov 2021

- Processed **terabytes of data per day** for machine-learning workloads by building a scalable **Python** ingestion pipeline using **Apache Kafka** for streaming, **Apache Cassandra** for storage and **Dask** for parallel processing.

EDUCATION

2019 – 2023 **Indian Institute of Technology (IIT) Goa** (CPI: 8.08/10)
B.Tech in Mathematics and Computing

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, Python, SQL, C++
Frameworks & Testing	Spring Boot, Node.js, React, Redux, JUnit, Jest
Backend & Architecture	REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, Object-Oriented Design, Payment Gateway Integration, OAuth 2.0, JWT, RBAC
Data & Messaging	PostgreSQL, DynamoDB, Redis, Elasticsearch, Apache Kafka, RabbitMQ, Apache Cassandra, Debezium
Cloud & DevOps	AWS (Lambda, API Gateway, EC2, S3, SQS, SWF, CloudWatch), Docker, Kubernetes, CI/CD
