SUMMARY

Software Engineer with 3+ years building full-stack, distributed systems across payments, fintech, and ML platforms, solving challenging business problems with strong software design skills.

EDUCATION

2019 - 2023 **B.Tech Maths and Computing** (CPI: 8.08)
Indian Institute of Technology (IIT) Goa

WORK EXPERIENCE

Amazon, Hyderabad - Software Development Engineer I Mar 2025 – Present

- Launched **prepaid payments platform** (Cards, UPI, Net Banking) enabling real-time charge deduction at shipment creation and saving **~\$10M p.a.** eliminating credit risk on non premium shippers.
- Designed and shipped an end-to-end fullstack **Wallet Refunds flow** with sync/async orchestration via **Amazon SWF**, ensuring idempotency and eliminating race conditions across distributed services.
- Cut **AWS Lambda invocations by 67%** (600K to 200K) and reduced end-to-end system latency by **65%** by eliminating redundant event processing in the package-transportation pipeline.
- Remediated a **critical production security vulnerability** that exposed internal cloud-storage parameters in file-download URLs, preventing unauthorized access to sensitive financial documents.
- Owned features end-to-end across **6+ microservices** in a distributed systems architecture — design, implementation, code review, unit/integration testing with Junit and Jest, and CI/CD deployment in a fast-paced Agile team.

iBind Systems, Bangalore - Software Development Engineer Jul 2023 – Oct 2024

- Developed **RESTful backend APIs** for a Corporate Identity Platform (CIP) for KYC cross-verification, document generation, and e-signing, **reducing manual intervention by 30%**.
- Led a team of 4 to build an **AI-powered video KYC solution** with liveness detection, improving accuracy from **80% to 93%** across desktop and mobile.

AI and Robotics Venture, Bangkok - Software Development Engineer Jun 2022 – Nov 2022

- Optimized **Redis cache** using Change Data Capture (CDC) with Debezium and Kafka, reducing DB query load by **40%**, latency by **30%**, and cache-miss rates by **53%**.

TECHNICAL SKILLS

Languages & Frameworks	Java, JavaScript, TypeScript, Python, C++, React.js, Redux, Node.js
Backend & Data	OOP, Design Patterns, Data Structures & Algorithms, System Design, ElasticSearch, PostgreSQL
Cloud & DevOps	AWS (S3, RDS, CloudWatch, DynamoDB, SQS), Docker, Kubernetes
Gen AI	LLMs, Prompt Engineering, AI Agents, RAG, AI-assisted development

PROJECTS

3D Cell Segmentation: B.Tech Thesis Jan 2023 – May 2023

- Designed a custom 3D CNN with attention mechanisms for cancer cell segmentation; improved IoU by **3.7%**, Precision by **5.1%**, and cut model size by **89%** vs. CA-UNet using Python, TensorFlow, and CUDA on HPC clusters.
